Aaron.a.macken@gmail.com

Summary

A free lance web developer using the MERN technology stack. Experienced in designing, developing, debugging and assisting clients in creating elegant solutions that work for them.

Experience

Freelance Web Development, Seattle, WA - 2019 - Present

https://www.hippiehousenc.com - hippie-controller-am.herokuapp.com - github.com/AaronMacken

- Designed and developed an e-Commerce website for a CBD dispensary located in North Carolina. The site was created with React, Redux-Persist and a number of other third-party packages. Stripe API is used to handle payments safely. Currently in test mode.

- Created a separate front-end application which allows for store admins to easily modify their product data via axios requests. Components are protected via JWT authentication. Created quickly using material UI.

- Developed a secure back-end application to support both front-end sites. Contains routes for processing Stripe payments and RESTful API endpoints to handle C.R.U.D. functions for the product data. The non-read routes are protected via JWT authentication.

Education

Bellevue University, Bellevue, NE — Bachelor of Science in Software Development - July, 2020 (*In Progress*)

Pierce College, Puyallup, WA — Associate in Technology - August, 2017
